

Diligent Robotics

Increasing healthcare value through robotics

Enhancing Patient Care

Via an A.I. framework that includes social intelligence, mobile manipulation, and human-guided learning, Moxi supports nurses and other clinical staff so they can focus on what matters most: patient care.

Delight Patients & Staff

I think it's important to have Moxi be present because they not only provide an opportunity to improve workflows and be more efficient, but they're a fun thing to see around the halls. They feel very future forward.

-Melanie Barone, RN, Cedars Sinai

Moxi can take that for you.

- Secure storage allows Moxi to deliver a variety of supplies
- 3 drawers provide ample space for multiple deliveries
- Once loaded, Moxi autonomously navigate your hospital environment to complete the delivery

24 hrs a day,
pandemic or not.

Give back time to your healthcare staff to focus on what they do best: patient care.

If we can eliminate the 10-15 minutes it requires for a nurse to run to the lab, so they can focus on the patient? That's huge.
